

This is a great example of tissue grafting this patient came to Dr. Richardson upset by the appearance above her front tooth. The tooth on the right side is actually an older implant the patient had it placed many years ago and has been dissatisfied for many years. She came to Dr. Richardson not knowing if anything could be done to resolve the appearance. Through tissue grafting Dr. Richardson was able to completely change the patients smile to one she is proud to show off!

When the roots of teeth are exposed due to receding gums patients can have sensitivity. Restoring the gums to their natural position can alleviate these symptoms. This is an example of one of Dr. Richardson's patients who no longer has sensitivity because of soft tissue grafting.

The photo on the left is of a young woman that had very low gums on the fronts of her lower teeth. Due to the position of the gums she felt that her teeth looked to long. Dr. Richardson was able to use an advanced tissue grafting technique to improve her appearance by raising the gum level.
